

The Hermitage Food Waste to Energy Facility and Wastewater Plant

We accept food wastes packaged and unpackaged. We are capable of converting food waste to energy via our anaerobic process. Recycling costs are less than landfill disposal and more environmentally friendly.

We capture the methane gas produced during the process and use it to generate electricity. We then send the energy back to the grid for distribution.

Currently we are converting more than 200 tons per/month. Our facility is located within easy access to Interstate 80 halfway between Pittsburgh, PA and Cleveland, Ohio.
